

Conveyors designed and built

Allpro engineering has designed and manufactured many types of purpose built conveyors. No two conveyors are really ever the same but what is the same is the design and building quality we offer. Whether it is to modify an existing line or a complete line design and fit out, we have the experience and know how to make it happen.

Conveyors are designed and drawn in 3D models giving the client the best visual representation before a single part is manufactured.

We make sure what is designed is what is installed, quality will be kept to the highest standard all the way through to the installation stage.

Types

Slat and tab type
Modular belt

Flat flexible belt
Incline

Roller
Chain
